NET Framework's Visual Studio integrated this font at last. Calibri is a pleasant font and comparatively smarter than other various other font of similar kind, and this font, designed by Luc(as) de Groot, was created as an alternative to other similar fonts that have been in existence a whole lot. Calibri is the first sans-serif font ever officially registered by Microsoft, and the first ever font to be officially trademarked. The Calibri font is a humanist sans-serif font which uses a slab-serif and a rounded-headstone weights. The font's typographical features are warmth, hand and legibility. It is a nice font. Calibri is built on Microsoft .NET Framework's Visual Studio and could be used with the Open Source .NET Framework (Mono). Advantages The Calibri font is built on the .NET Framework's Visual Studio. It is a humanist sans-serif font that uses a slab-serif and a rounded-headstone weights. Although the Calibri font is used for the most widely utilized Microsoft .NET Framework application, the font is best when it comes to using the fonts with programs that are not based on .NET Framework, such as the Java platform. The Open Source .NET Framework (Mono) is a version of .NET Framework which is free, open source, and built on the Mono platform. Mono is a development framework that enables developers to create applications in Microsoft .NET Framework. Mono supports the Open Source .NET Framework and provides a free development environment for both Windows and Linux platforms. Visual Studio and other Microsoft .NET Framework applications that use Calibri, such as Microsoft Word, do not require any special font-handling techniques. The typeface does not need to be declared in any applications. The Calibri font is an advancement from its predecessor, Arial, in every aspect, including the .NET Framework integration, special characters, character width, display in various operating systems, and feature of language. Arial, a monospace font, is the most commonly used typeface by the general public. Arial is the most widely utilized font. Arial font is built on the Open Source .NET Framework, and the font had been later officially registered by Microsoft. Arial font is built on the Open Source 82157476af
